14.2 Calcium Bromide

SINGLE SALT BLEND

Overview
14.2 pound per gallon calcium bromide solution is used as a completion, workover, or packer fluid. It can be used as a single salt fluid or as a component in a multi-salt blend. It can also be used as a spike fluid to increase density.

Features and Benefits
- Inhibitive properties can prevent hydration that may lead to migration of swelling clays.
- Can be blended with other clear brine fluids to achieve a specific density and crystallization temperature.
- Generally compatible with most oilfield elastomers.

Caution: Fluid additives, formation water and other contacting fluids should be screened for compatibility with the brine prior to use.

Bulk Liquid

Recommended Treatment

Use the amount necessary for density adjustment. See blending tables or consult a TETRA representative for specific requirements.

Safety and Handling

Avoid skin and eye contact, inhalation or ingestion. For skin contact, wash with soap and large quantities of water. For eye contact, flush with large quantities of water. Use properly designed respirator if adequate ventilation is not available. Refer to the Safety Data Sheet for specific details.
